Summary of Key Risks:

Feature 1: GUI

Risk: GUI Design takes inordinate amount of time

Potential Cost: Less time spent developing useful functionality due to time spent making an aesthetic GUI

Mitigation Strategy: Aim to make GUI simple and minimalistic

Risk: Running the program from an html link proves tricky to implement

Potential Cost: Proposed Feature 2 becomes unviable

Mitigation Strategy: Prioritize proposed feature 1

Feature 2: Parallel Mode

Risk: Synchronization errors, such as race condition and deadlock

Potential Cost: Extensive time tracking and debugging errors

Mitigation Strategy: Rework prior tests for parallel situations, test more extensively
